

19" Mounting Panel HPP-120F

Features:

- Panel made of SPCC steel
- 19 inch 1RU panel for e.g. HS- and HT splitters an tap series
- 120 F-port holes with 22mm port-port distance for horizontal and vertical mounting
- Versatile and flexible solution supporting many applications

Description

There is an ever increasing requirement for splitting and combining of RF-signals with a very high quality and a quick off the shelf delivery. Therefore Technetix developed a concept with which we are able to deliver a versatile and flexible solution supporting many different head end applications.

The HPP-120F is a 19 inch 3 RU mounting panel specially designed to accommodate our head end HS- and HT-Splitter and Tap series. The HPP-120F has 120 F-port holes with a 22 mm port-port distance for both horizontal and vertical mounting. The HPP-120F panel can be stacked together to support e.g. the 8-way HS-08 splitter also in a vertical way. The HPP-120F is made of painted SPCC steel (Steel Plated ColdRolled Coil) to which the splitting/combining units can be mounted by screws through the panel in order to have enough thread length left for any F-male connector.
